

Mail Security

Best protection from spam, viruses and phishing for all mail servers.

As a company, you rely on secure and available communication via e-mail at all times. In addition to ever more spam and viruses, targeted attacks are carried out via e-mail that threaten your company. Mail Security lets your employees focus on their jobs. Because threats such as viruses, trojans and phishing are blocked before they reach your network.

What is Mail Security?

Mail Security from Swisscom is the complete solution for security, validation and management of e-mails and works with all mail servers. Multi-stage filter process and innovative technologies guarantee the best detection rates and reliability. Mail Security can be set up for existing mail servers quickly and easily. Common work steps for administrators are also resolved intuitively for customers in the Admin portal. With Mail Security, you secure your e-mails professionally and prevent threats reaching your network through e-mails.

Your benefits

- > Best detection thanks to multistage scanning engines and filtering method
- > Always up-to-date with filter updates by the minute
- > Cost-effective, you only pay for what you actually use (per user)
- > No hardware or software installation needed
- > Intuitive web portal, easy administration
- > Full control of all settings, with «Best Practice» preconfiguration
- > Detailed reporting and logging
- > Prevents loss of data: your e-mails will be temporarily stored for up to 5 days in the event of a failure in your infrastructure
- > Keeps threats away before they reach your network

Comprehensive protection for your mail server could not be easier. Order your offer free of charge and with no obligation.

Facts & Figures

Mail Security – in detail

Basic services

Anti-virus and anti-spyware

The service detects and filters harmful e-mail attachments in realtime using the signature.

Anti-spam and anti-phishing

Reliable detection of spam and phishing using a combination of various criteria and scanning engines.

Heuristic detection

Spam and viruses which are not known by signatures are detected heuristically.

Useful defaults

You use the service with our defaults, as most customers, and can adjust them to your liking at anytime.

Full control

You decide what happens to the spam e-mails and other threats detected (quarantine, delete, redirect, etc.).

Intuitive portal

Common tasks, such as restoring e-mails or entering them in the whitelist or blacklist, can be quickly and intuitively carried out.

Segregation of duty and data protection

You can create your own admin users as you like and manage their rights yourself. As Admin, the content of your users' e-mails cannot be read, viewed or copied.

E-mail delivery assurance

If the mail server fails, incoming e-mails are saved for up to 5 days.

Inflow/outflow traffic policies

Allows filtering, redirecting or classifying due to attachments or other criteria.

Geo-IP-filter

You define rules based on the region or the country from which the e-mails are sent.

Encryption enforcement

Enforcing the secure delivery of e-mail via TLS is possible.

E-mail analytics

Detailed forensic information and log data for all e-mail transactions.

Optional services

Archiving your e-mails

For longterm archiving, there are some suitable options available to you according to your requirements.

Enter the digital future with Swisscom

Visionary companies use the possibilities of digitisation to reinvent the future. With numerous innovations, Swisscom is opening up new areas of business. We see it as our responsibility to help you maximise the benefits of digitisation.

We will provide you with the best network infrastructure, secure data storage, reliable project management, successful implementation and numerous innovative solutions.

Welcome to the country of possibilities.
